

Special Modification Request “There’s An SMR For That” IP Config

[David Marin](#), Sr. Manager- SMRs

IP Camera, Custom Addressing and Configuration, Value Added Service.

Any model of the Pelco IP Camera can be pre-addressed and configured in the factory. Addressing includes NIC address, subnet mask; gateway can be addressed uniquely for each camera purchased. Also, other settings like displaying the date, time, and camera name can be turned off. Preinstalled security certificates, image rate, resolution, and compression can be set per the customer’s requirements. Labeling each camera and shipping box is an additional feature with the camera name and unique information supplied by the customer.

This value-add service is a huge installation time saver.
